#### Weaknesses

#### • Working capital intensive operations

SC's operations are working capital intensive marked by high Gross Current Asset (GCA) of 72 days for FY2020(Prov.) compared to 73 days in FY2019. The working capital limits were fully utilised for the past six months ended April 2020. Acuite believes that the efficient working capital management will be crucial to the firm in order to maintain a stable credit profile.

#### • Proprietorship nature of the firm

The firm is exposed to the risk associated with the proprietorship nature of the firm including capital withdrawal risk that could adversely affect the capital structure limiting financial flexibility.

#### • Geographic and concentration risk

The firm majorly undertakes orders from govt. majorly in the Maharashtra region exposing the firm to significant geographic concentration risk associated with its operations. Any change in awarding the contracts will have a significant negative impact on overall operations of the firm.

#### • Competitive and fragmented industry

The firm is engaged as civil contractor. The particular sector is marked by the presence of several mid to big size players. The firm faces intense competition from the other players in this sector, which can impact its profitability and operations going forward. Risk become more pronounced as tendering is based on minimum amount of bidding of contracts. However, this risk is mitigated to an extent on account of extensive experience of the management.

#### Liquidity Position: Adequate

The company has adequate liquidity marked by moderate net cash accruals to its maturing debt obligations. The company had cash accruals of Rs.18.58 crore in FY2020 (Provisional), while the maturing debt obligations were Rs.7.10 crore during the same period. The cash accruals is estimated to remain around Rs.20.00 crore during FY2020-FY2021. The company's working capital intensive operations has led to increased reliance on working capital borrowings in the current year to fulfill its working capital requirements. Its short term facilities remain fully utilized during the last 6 months period ended April 2020. The current ratio stood at 0.96 times as on March 31, 2020 (Provisional). Acuite believes that efficient working capital management with enhanced working capital facilities will keep the liquidity profile of SC's adequate over the medium term.

#### Rating Sensitivities

- Improvement, sustainability and healthy growth of revenues and profitability margins.
- Deterioration in the working capital cycle leading to stress on the liquidity position.

#### Material Covenants

#### Outlook: Stable

Acuite believes that SC will maintain a stable outlook in the medium term on account of its experienced management. The outlook may be revised to 'Positive' if the firm registers higher-than-expected growth in revenues and net cash accruals while maintaining healthy debt protection metrics. Conversely, the outlook may be revised to 'Negative' in case the firm registers lower-than-expected growth in revenues and profitability or if the financial risk profile deteriorates due to higher than expected working capital requirements.
