Weaknesses

>Uneven Margins and risk of capital withdrawal

Riddhi siddhi group operates in textile industry which is cyclical and exposed to demand – supply risk, along with susceptibility of margins to raw material prices. The same is visible in historical performance of the group. The operating margins stood declined at 1.57 percent in FY2021 as against 3.16 percent in FY2020 and 3.95 percent in FY2019. PAT margins also stood declined at 0.93 percent in FY2021 as against 1.11 percent in FY2020 due to increase in certain fixed costs. Further, group consist of firms which are exposed to capital withdrawal risk which is a key rating sensitivity.

>Highly fragmented industry and exposed to agro climatic risk

The group operates in a highly fragmented cotton industry characterised by the presence of a large number of unorganised players, thereby impacting the group's bargaining power. Cotton prices are regulated by the government through MSP (Minimum Support Price) mechanism. However, the selling price of the output depends on the prevailing demand supply situation restricting the bargaining power with customers, thereby impacting margins.

Acuité believes that the group will be able to mitigate this risk to some extent on account of its promoters' experience and well established position in the market. Further, cotton being a seasonal crop and the production of the same being highly dependent upon monsoon, the group is always exposed to agro climatic risk.

Rating Sensitivities

- Any deterioration of its financial risk profile and liquidity position.
- Any elongation of the working capital cycle leading to deterioration in debt protection metrics.
