Transaction Structure:

The transaction is structured at par. The rating addresses the timely payment of interest on monthly payment dates and the ultimate payment of principal by the final maturity date, in accordance with transaction documentation.

Assessment of Adequacy of Credit Enhancement:

Acuite has arrived at a base case delinquency estimate of 1.5% – 2.5 % in respect of the loan assets being securitised. Acuite has further has applied appropriate stress factors to the base loss figures to arrive at the final loss estimates and consequently the extent of credit enhancement required. The final loss estimates also consider the risk profile of the particular asset class i.e. unsecured loans, the borrower strata, economic risks and the demonstrated collection efficiency over the past few months. Acuite has also considered the track record of operations of the originator and certain pool parameters while arriving at the final loss estimate. Acuite has accounted for the probable impact of COVID19 in the transaction for its analysis.

Legal Assessment:

The final rating is assigned based on the fulfilment of the structure, terms and covenants detailed in the executed trust deed, servicing agreement, legal opinion, accounts agreement, assignment agreement and other documents relevant to the transaction.

Key Risks

Counterparty Risks:

The pool has an average ticket size of Rs. 37,362, minimum ticket size of Rs. 25,000 and maximum of Rs. 52,400. Considering the vulnerable credit profile of the borrowers, the risk of delinquencies/defaults are elevated. These risks of delinquencies are partly mitigated, considering the efficacy of the originator's origination and monitoring procedures.

Concentration Risks:

Since the pool is granular, i.e. underlying assets in the pool are in nature of unsecured business loans to 2,885 borrowers, hence the risk is significantly mitigated. However, there is significant geographical concentration in the pool, since Bihar contributes to 82.6% of the pool, which is partially mitigated as the pool is spread across 37 branches.

Prepayment Risk:

The pool is subject to prepayment risks since rate of interest is significantly high and borrowers may be inclined to shift to low cost options (based on availability). Prepayment risks are partially mitigated by prepayment penalty levied by the company for pre-closures. In case of significant prepayments, the PTC holders will be exposed to interest rate risks, since the cash flows from prepayment will have to be deployed at lower interest rates.

Servicing Risk

There is limited track record of servicing PTCs, since this is the first PTC transaction for the originator.

Commingling Risk

The transaction is subject to commingling risk since there is a time gap between last collection date and transfer to payout account.

Regulatory Risk

In the event of a regulatory stipulation impacting the bankruptcy remoteness of the structure, the payouts to the PTC holders may be impacted.

Liquidity Position – Adequate

The liquidity position in the transaction is adequate. The cash collateral available in the transaction amounts to 8.0% of the pool principal. The PTC payouts will also be supported by an internal credit enhancement in the form of over collateralisation (10.00 % of pool principal) and excess interest spread (10.27 % of pool principal).

Key Rating sensitivity

- Collection performance of the underlying pool
- Credit quality of the underlying borrowers

- Decrease in cover available for PTC payouts from the credit enhancement

Material Covenants

The following covenant is included in the transaction structure: The purchase consideration to be paid by the issuer to the originator for purchasing the pool is equal to Series A1 issue price.
