High geographic concentration and intense competition along with vulnerability to input price fluctuations

VIPL is exposed to the cyclical nature inherent in the construction industry and intense competition in the tender based contract award system, along with fluctuations in input costs (steel, cement etc.) likely to result in volatility in revenues and profit margins. However, its long standing promoter's presence, past track record of timely execution of projects and established relationship with the clients led to healthy repeat order inflow. Acuite believes that the ability of the company to withstand intense competition amidst tender based nature of business and fluctuations in input prices would remain a key rating monitorable.

- Sustained increase in order inflow, providing revenue visibility in the medium term
- Working capital management
- Deterioration in financial risk profile
