The profitability margin improved Y-o-Y. The EBITDA margin improved to 8.04 percent for FY2017 as against 7.64 percent for FY2016 and 6.56 percent for FY2015. - **Intense competition, fluctuations in raw material prices**

SMPL operates in a highly competitive industry with a large number of organised and unorganised players. Further, margins are susceptible to fluctuations in raw material prices as polymers, additives and pigments are derived from crude.

- **Foreign currency fluctuation risk**

The profit margins are also exposed to forex fluctuation risk as the company imports 50 percent of its raw material requirements. The company has no hedging policy in place.

### Analytical Approach

SMERA has considered the standalone business and financial risk profiles of the company to arrive at the rating.

### Outlook: Stable

SMERA believes that SMPL will maintain a Stable outlook over the medium term owing to the extensive experience of its promoters. The outlook may be revised to 'Positive' in case the company registers substantial increase in profitability margins supported by healthy revenue growth. Conversely, the outlook may be revised to 'Negative' in case of sharp decline in profitability margins or significant deterioration in the financial risk profile due to debt-funded capex or elongated working capital cycle.
