28-Oct-21	6.3	5.6	0.6	0.6	9.78%

** Available credit enhancement as % of current principal outstanding

Observations as per October 2021 payout:

The servicer collection efficiency fell slightly to 98.5% from 99.4% in the previous month. However, it still remained at a healthy level. Even though this transaction was settled close to the Covid19 second wave, the healthy collection efficiency proves the resilient performance of the pool handpicked for the PTC transaction.

The 90+dpd as % of original POS rose to 0.26% from 0.0%, although it stayed well within the initial assumptions. The 180+dpd as % of original POS remained at 0.0%, because the transaction was settled recently.

Amortisation and Credit Enhancement Utilisation

Acuité did not observe any significant deviation in the actual amortisation curve from the initial assumption. The transaction amortised to 23.31% from 16.23% in the previous month. There had been no utilization of credit enhancement in the transaction since its settlement, which is a positive indication. Although all the major parameters of this transaction remained healthy, it must be monitored closely going forward, since the transaction was settled soon after the second wave of Covid19.

Observations as per October 2021 payout:

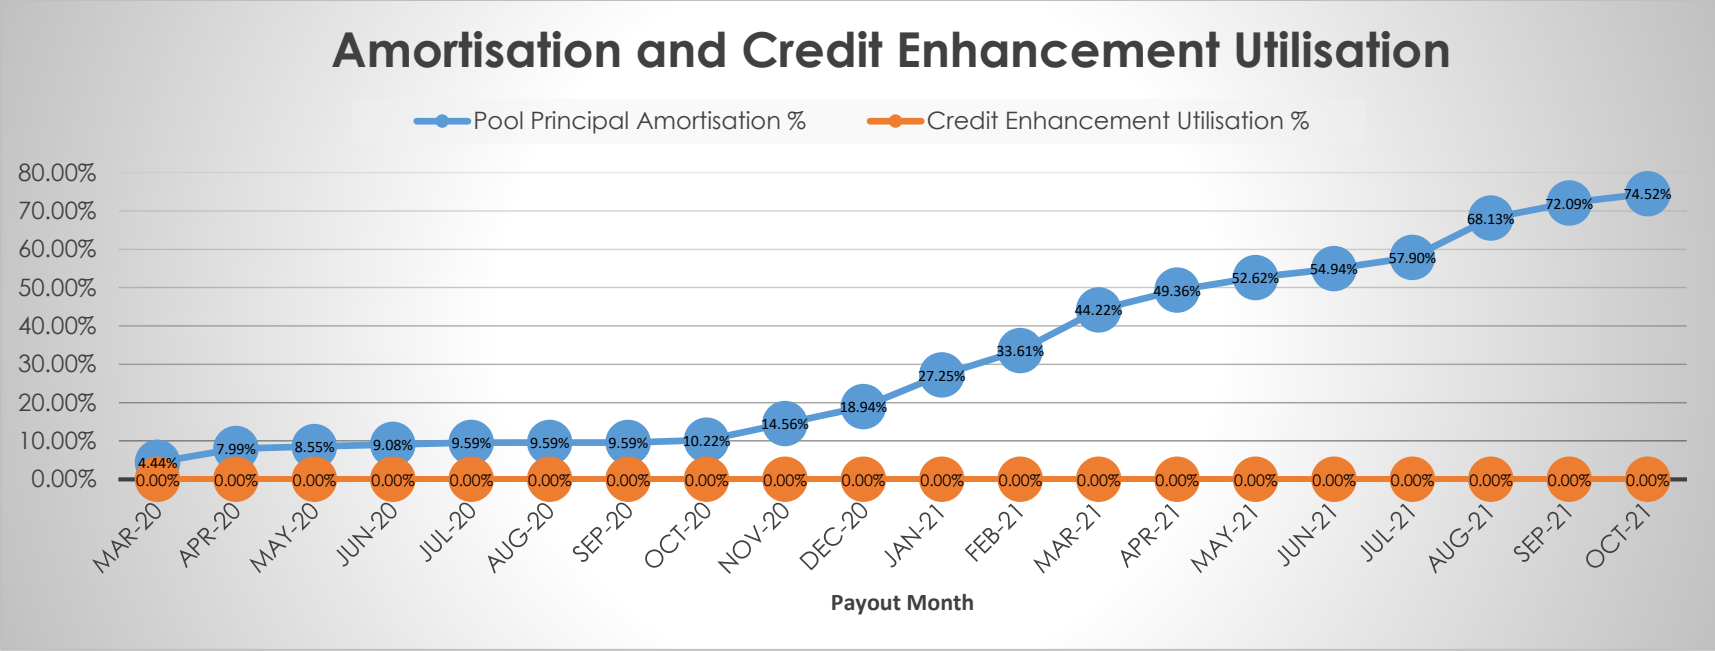

*The data for October 2021 payout excludes the effect of opening principal overdues for current month (non-terminated accounts)

For this unsecured loans PTC transaction, the collection efficiency worsened sharply during the second wave of the pandemic, but improved in August 2021 payout. However, since then, the collection efficiency has again been adversely affected due to the piling up of overdues and unsecured nature of the loans. The collection efficiency fell to 69.0% from 74.5% in the previous month. While Acuité derives comfort from the significant amortisation and improving delinquencies for this pool, it will closely monitor any deterioration of collection efficiency in the upcoming months.

Acuité noticed considerable improvement in the delinquencies of this pool post Covid19 2.0. The transaction witnessed 90+dpd of 1.83% as % of original POS, which is within the initial default assumptions. Furthermore, the 180+dpd, after worsening to 3.75% as % of original POS in July 2021 payout, has recovered to 0.0%, which is a healthy sign. In the near future, Acuité anticipates the delinquencies to remain within the initial default assumptions.

The transaction has reached a significant amortisation of 74.52% as per October 2021 payout. Also, there has been no utilisation of credit enhancement. This, combined with the fact the credit enhancement built-up to a healthy 39.34% of the outstanding POS, are positive signs.

Observations as per October 2021 payout:

This two-wheeler PTC transaction's collection efficiency showed resilience during the second wave of the pandemic by never dipping below 100.0% since the settlement date. As per October 2021 payout, the collection efficiency remained stable at 100.0%. Going forward, Acuité expects the transaction to display healthy collection efficiency, excepting any unforeseen incident.

All the loans in the transaction remained in the CURRENT bucket, showing no deterioration in the asset quality of the pool. Going forward, in the absence of any unforeseen incident, Acuité believes that the delinquencies would remain within the initial assumptions.

The transaction has amortised significantly by 63.89% with no utilisation of credit enhancement as of October 2021 payout. However, this transaction has witnessed a relatively high prepayment owing to a majority of the customers paying their EMI's in advance. In the future, Acuité expects the amortisation progression in this transaction to proceed as per the initial assumptions.

Observations as per October 2021 payout:

The overall collection efficiency of this MFI PTC transaction remained stable during the second wave of the pandemic. It reduced slightly in September 2021 (88.4%) and October 2021 (87.7%) payouts as compared to the months before, mainly because of the piling up of overdues. The overall collection efficiency is expected to improve as the overdue collection efficiency rises in the upcoming months.

The 90+dpd as % of original POS worsened to 0.77% from 0.05% and the 180+dpd as % of original POS deteriorated to 0.09% from 0.00% in the previous month. The delinquencies, however, still remained well within the initial assumptions. Although Acuité expects the asset quality to stay in the healthy zone as per the initial assumption, the transaction will be monitored monthly.

The transaction has steadily amortised to a considerable 45.07% from 39.10% in the previous month, without any utilisation of the credit enhancement, which are positive indications.

Observations as per October 2021 payout:

The collection efficiency of this MFI PTC transaction was impacted in the period June 2021 to August 2021 payout months due to the second wave of the pandemic. However, the parameter made an improvement thereon, recording a collection efficiency of 98.1%, up from 97.5% in the previous month. Acuité believes the collection efficiency would not deviate too much from the initial assumptions, going forward.

After displaying a slight spike in September 2021 payout, the 90+dpd has improved to 0.04% from 0.29%, which indicates a healthy asset quality. The 180+dpd remained at 0.0%. Acuité expects the delinquencies of the transaction to stay well within the initial assumptions.

The transaction showed utilization of 8.53% of the original credit enhancement in June 2021 payout, in order to cover for the shortfall in collections due to the second wave of the pandemic. However, the credit enhancement was subsequently replenished in October 2021 payout. Although, the chances of credit enhancement utilization are low in the upcoming months barring any unforeseen events, Acuité's will closely monitor the level of credit enhancement in this transaction on a monthly basis. The transaction is significantly amortised at 75.10%.
